Final Project Proposal

Due Oct 18, 2019 by 11:59pm   **Points** 50   **Submitting** a text entry box or a file upload
File Types txt   **Available** after Oct 11, 2019 at 12am

Please upload your final project proposal, addressing the following:

. provide a title / topic, and genre of your game
. list team members (up to 3 members). Single-person project is also allowed.
. describe one or two paragraphs about the game
. list the topics (including those to be covered in the future) in class that will be used in your project
. if multiple members are on the team, describe how the work will be partitioned

Note 1: Do not use any Khan-specific images or sounds created in your project.
Note 2: Make sure your game can eventually be embedded on any html page, as given on canvas
Note 3: Use radians for all your angles (to satisfy note #2 above)
Note 4: Do not use Boolean variables such as mouseIsPressed. Instead declare mPressed as a global variable and set its value in mouseClicked(), mousePressed(), mouseReleased() instead.

Your final project game should consist of
. Starting screen, with animation
. Options screen, with instructions and options
. Game Play screen, with multiple levels and lives, if applicable
. Ending screen, with animation, allowing users to play again or quit

Both creativity and artistic effort should be included in your game.

For multi-person projects, only one person needs to submit -- but make sure all member names are listed.
